JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Reports from Santiago—Inspection of vessels—Fumigation of vessel to destroy mosquitoes—Mosquito-inspection work—Status of yellow fever at Daiquiri—History of new case of yellow fever at Santiago.

Acting Assistant Surgeon Wilson reports, August 11 and 15:

Week ended August 8: Bills of health issued to 2 vessels bound for the United States. One of these, the British schooner *Glenafton*, bound, empty, for Mobile, was fumigated before leaving, to kill mosquitoes.

No quarantinable disease has been reported in this city during the week.

The following is a report of the mosquito-inspection work:

Houses inspected.....	5, 612
Houses in which larvæ were found.....	60
Reinspections.....	787

In my last weekly report, dated August 5, I mentioned that there were 4 cases of yellow fever at Daiquiri, of which one had died and one was discharged cured. There were 2 remaining under treatment. These were discharged cured on August 7, and up to to-day no new case has been reported.

August 15. Another case of yellow fever has occurred at Daiquiri. His history is as follows: F. D., Spaniard; taken sick July 31; admitted to hospital August 1; discharged cured August 13. It was a mild case.

CURACAO.

Fatal yellow fever case; imported.

Consul Cheney reports, July 7:

The authorities have established quarantine at this port against all vessels proceeding from Puerto Cabello. A case of yellow fever developed here July 1, the patient dying July 2. The patient was a woman, belonging to a Spanish vaudeville troupe, which has been touring Venezuela. She had been here a week. A week has intervened and no other case has developed. The patient was immediately quarantined in hospital. The quarantine is mainly with reference to the plague, which, so far, Curacao has escaped. There is an excellent quarantine station at Caracas Bay, about 7 miles east of the port. About 75 refugees from La Guaira, all Curaçaoans, have passed quarantine there since the disease broke out in La Guaira. Up to the 2d instant, free ingress was given to passengers from Puerto Cabello who could show that they had not been in La Guaira or Caracas within ten days.

GUATEMALA.

Report from Puerto Barrios, fruit port.

Acting Assistant Surgeon Wailes reports:

Week ended August 13. Present officially estimated population, 250. General sanitary condition of this port and the surrounding country during the week, good.
